

SharePoint Solution Developer

Polestar Technologies is looking for a qualified *SharePoint Application Solution Developer* to support SharePoint infrastructures of government programs in Newton, MA and Edgewood, MD. The SharePoint Application Solutions developer is responsible for designing and developing SharePoint-based applications that interact with enterprise databases, web services, and applications. The SharePoint Application Solution developer will also guide and set standards for web application development teams as they provide service-based views of their applications through MOSS.

Responsibilities

- Build custom web parts for surveys, document approval workflows and tasking
- Integrate existing line of business Cold Fusion and .NET based portals/applications into SharePoint:
 - Define and Develop custom applications within the .NET and MOSS framework
 - Develop and consume new or existing web services to integrate back end systems with MOSS Portal
- Coordinate with data owners to ensure appropriate controls are placed on data distribution
- Evaluate requests for custom features for feasibility to execute within MOSS
- Script deployment of web parts and features within MOSS structure
- Define and implement configuration standards including Metadata Tagging
- Create system documentation and standard operating procedures for enterprise development within a MOSS framework
- Access Control management governance definition
- Manage concurrent rollouts to several offices with custom build requirements
- Provide tier 3 technical support to site administrators when coding or integration issues arise
- As needed, coordinate web part deployment and testing with software architect

Requirements

- BS/MS Degree in Computer Science or related field
- Experience developing and configuring MOSS for “SharePoint Solution” development – Custom Development within MOSS Framework
- Management and coordination experience with large systems rollout
- Excellent Written and Verbal Communications, particularly with a customer focus
- SQL Server database development experience
- Experience integrating Active Directory with SharePoint solutions
- Technical requirements definition

Additional Preferred Qualifications:

- 5+ years of Component-based software development with strong C# skills coupled with SQL Server
- 3+ years SQL Server database development experience
- SharePoint implementation experience
- Visual Studio
- Excellent Written and Verbal Communications
- Office 2003/2007
- Active Directory Integration with applications
- Technical requirements definition
